Summary

Computer Engineering student with experience in microservices architecture, Docker, and Kubernetes. Strong background in database systems and scalable infrastructure development. Focused on developing sustainable software solutions integrated with deep learning and machine learning. A collaborative team player with analytical thinking skills and a strong willingness to learn.

Experience

Intern, Şahinler Holding ASB, Tekirdağ Aug 2025 – Sept 2025

- Observed and documented system operations in the SCADA control system.
- Designed relational database schemas and performed data analysis using PostgreSQL and MSSQL.
- Gained hands-on experience with Docker infrastructure and containerized deployment.
- Built and managed multi-container applications using Docker Compose and Docker Swarm, and prepared deployment documentation.

Education

Eskişehir Osmangazi University, Computer Engineering BSc Sept 2021 – Present

- GPA: 3.32/4.0

Zagreb University of Applied Sciences Oct 2024 – Feb 2025

- Erasmus+ Exchange (Computer Engineering)

Projects

Optic Form Reader

- Developed a camera-based optical form reader system. The system captures optical forms via camera, detects marked fields, compares them with predefined answer keys, and calculates correct/incorrect results.
- Technologies: Python, C++ , OpenCV

Face Recognition-Based Lock System

- Developed a face recognition-based smart lock system using Python. The system performs real-time facial recognition through a camera and grants access to authorized users. Implemented real-time processing modules by integrating hardware and software components.
- Technologies: Python, C++ , Arduino, OpenCV, Computer Vision

Company Maintenance System

- Developed a Computerized Maintenance Management System (CMMS). geliştirildi. Enabled equipment tracking, periodic maintenance planning, and work order management. Aimed to digitalize maintenance processes and improve operational efficiency.
- Tools Used: MSSQL, Javascript, Python, React, Docker

Certifications

- Machine Learning with Sklearn and Tensorflow, CodeSignal January 2025
- Fundamentals of Deep Learning, NVIDIA June 2025
- Huawei Cloud Kubernetes (CCE) Bootcamp, Huawei December 2025
- Python for Machine Learning, BTK Academy May 2025
- MSSQL, BTK Academy September 2025

Technologies

Programming Languages: C++, C, Java, C#, SQL, JavaScript, Python

DataBase: PostgreSQL, MSSQL

Machine Learning & AI: Tensorflow, Keras, Scikit-learn, Numpy, Pandas

DevOps & Cloud: Docker, Kubernetes
